STRENGTHS

Comprehensive Coverage
The use cases cover a wide range of functionalities essential to a multiplayer gaming platform, including authentication, profile management, social interactions, gameplay options, and game result processing.

Attention to Edge Cases
Many use cases list exceptions, which show consideration for various issues that could arise, such as network failures or invalid inputs.

AREAS OF IMPROVEMENT

- **Lack of Detail in Scenarios**
    - Some use cases have scenarios that lack specific system responses or user feedback at each step
- **Incomplete Exception Handling**
    - While some use cases have exceptions, some of them don't provide complete coverage of possible errors or interruptions
- **Limited User Feedback Descriptions**
    - Across several use cases, the feedback that the system should provide to users (ex: error messages, confirmations, notifications) is not fully described

SELECTED USE CASES FOR DETAILED CRITIQUE

1. Send Message
2. Player Registration
3. Process Game Result
4. Challenge Friend
5. Manage Account
