Use Case: Home menu

Iteration: 2

Primary Actor: User

Goal In Context: User is at the home menu screen for Checkers, where they can choose to enter the queue to play the game

Preconditions: The user has logged in and is at the player profile home menu

Trigger: The user chooses to play Checkers and clicks on Checkers

Scenario:

1. The user has logged into their account
2. They are now at the player profile home menu
3. They choose to play Checkers and clicks onto the game
4. They are brought to the home menu screen for Checkers

Post Conditions: The user now has the option to view the leaderboard for Checkers, and to join the queue for the game

Exceptions: N/A

Priority: High, this is need so that the user can play this game and see the leaderboard

When Available: Within the second iteration

Frequency of Use: High

Channel to Actor: Screen, mouse

Use Case: Game queue

Iteration: 3

Primary Actor: User

Goal In Context: The user would be at a screen where they wait in a queue to get matched

Preconditions: The user has logged in and is at the Checkers home menu

Trigger: The user decides to play Checkers and clicks on play

Scenario:

1. The user has logged into their account
2. They choose to play Checkers and clicks on play
3. They are brought to the queue screen to wait for their turn to get matched
4. They can then choose if they want to cancel queuing and get back to the game home menu

Post Conditions: The user is successfully matched up with another user, or they could not be matched up because no match is found

Exceptions: No other user wants to play Checkers at the same time and matching up fails

Priority: Medium, users should still be able to join a game without this screen

When Available: In the third iteration

Frequency of Use: High

Channel to Actor: Screen, mouse
